

## EDUCATION

---

- **University of Massachusetts, Amherst** Amherst, MA  
*Bachelor of Science, Informatics (Data Science)* May 2026
  - **Coursework:** Data Structures & Algorithms, Artificial Intelligence, Machine Learning, Databases, Computer Systems.

## EXPERIENCE

---

- **Siemens Digital Industries** Boston, MA  
*Customer Analytics Intern* May 2025 - Aug. 2025
  - Built and deployed an ETL pipeline in Snowflake/Python integrating 100M+ records across CRM platforms via REST APIs, enabling downstream LLM-powered workflows for the customer analytics team.
  - Analyzed 50k+ customer support tickets and usage patterns to surface 5 product improvement recommendations, 3 of which were prioritized on the Q4 roadmap.
  - Authored knowledge base articles for GraphStudio (knowledge graph platform) covering data ingestion, SPARQL queries, and REST APIs, reducing repetitive support requests and enabling faster self-onboarding.
- **Altair Engineering (acquired by Siemens)** Chelmsford, MA  
*Customer Success Intern (Data Analytics & AI products)* May 2024 - April 2025
  - Built a real-time customer health dashboard tracking 16,000+ enterprise accounts across 12 health metrics, surfacing 200+ at-risk accounts monthly, contributed to 12% churn reduction in Q1 2025.
  - Developed a Python churn prediction model achieving 95% accuracy in identifying at-risk accounts 90 days before renewal, enabling proactive outreach that saved \$1.2M ARR.
  - Conducted cadence calls with customers to gather feedback on product and support, translated insights into recommendations, and maintained customer journey documentation in Wrike.
- **BUILD (buildumass.com)** Amherst, MA  
*Co-President* Feb. 2024 - May 2026
  - Led a 65+ member engineering organization delivering software solutions for 10+ nonprofit clients, including: MassPIRG, STEMpire, Human Service Forum, New England First Amendment Coalition.
  - Owned technical scoping and client discovery across 8 production engagements, translating ambiguous stakeholder needs into engineering roadmaps and deliverables.
  - Established Agile workflows, code reviews, and CI/CD pipelines that reduced release cycles from 5 to 2 weeks.

## PROJECTS — [GITHUB.COM/SHREYANSHMISRA](https://github.com/shreyanshmisra)

---

- **Clause (HackUMass Best AI Hack) 🏆** — Python, FastAPI, TypeScript, Snowflake, Gemini API
  - Developed an AI-powered contract analysis platform using semantic similarity search to detect illegal clauses in legal agreements, reducing review times from 2 hours to 5 minutes, deployed to 3 legal clinics for beta testing.
  - Engineered a RAG pipeline and Snowflake vector store for embedding-based semantic search, achieving 92% accuracy in violation detection across 500+ contracts.
- **IncidentAgent 🏆** — Python, FastAPI, TypeScript, Sentry, Anthropic API
  - Built an autonomous incident-response agent that correlates production metrics and deploy history to identify likely offending commits, retrieve runbooks, and estimate user/dollar impact..
  - Implemented automated incident workflows generating Slack-style advisories and structured postmortems, with a live Sentry webhook integration and streaming web interface.
- **Kapok Disaster Response 🏆** — Flutter, Dart, Firebase, Mapbox API, Hive
  - Led a team to deliver an iOS/Android disaster relief coordination app handed off to the RN Response Network (National Nurses United) for deployment to 5k+ nurses during active disaster response operations.
  - Built a full offline-first architecture using Hive for local persistence and a queued sync layer, enabling full task coordination, team management, and Mapbox map caching in zero-connectivity field environments.

## SKILLS

---

- **Languages:** Python, TypeScript, JavaScript, SQL, Java, C/C++.
- **Frameworks:** Git, AWS (S3, Lambda, EC2), GCP, Docker, FastAPI, Redis, React, Next.js, PostgreSQL, Snowflake, Kafka, Spark, Airflow, dbt, Neo4j, Pinecone, Firebase, GitHub Actions, Excel, Tableau, Power BI, Figma.
- **AI Tools:** Claude Code, Cursor, Codex, n8n, LangChain, OpenAI API, Anthropic API, Gemini API.
