(413) 409-9781

EDUCATION

- **University of Massachusetts, Amherst** Amherst, MA
Bachelor of Science, Informatics (Data Science) May 2026
 - **Coursework:** Data Structures & Algorithms, Artificial Intelligence, Machine Learning, Databases, Web Programming, Computer Systems, Theory of Computation, Data Analytics with Python, Mathematical Modeling, Statistics.

EXPERIENCE

- **Siemens Digital Industries** Boston, MA
Customer Analytics Intern May 2025 - August 2025
 - Deployed an ETL pipeline in Snowflake and Python integrating 100M+ records across multiple CRM platforms via REST APIs, enabling downstream LLM-powered workflows for the customer analytics team.
 - Analyzed 50K+ customer support tickets and usage patterns to surface 5 product improvement recommendations, 3 of which were prioritized on the Q4 roadmap.
 - Authored knowledge base articles for GraphStudio (knowledge graph platform) covering data ingestion, SPARQL queries, and REST APIs, reducing repetitive support requests and enabling faster customer self-onboarding.
- **Altair Engineering (acquired by Siemens)** Chelmsford, MA
Customer Success Intern (Data & Analytics) May 2024 - April 2025
 - Built a real-time customer health dashboard tracking 16,000+ enterprise accounts across 12 health metrics, surfacing 200+ at-risk accounts monthly, reducing churn by 12% in Q1 2025.
 - Developed a Python churn prediction model (scikit-learn, scikit-survival) achieving 95% accuracy in identifying at-risk accounts 90 days before renewal, enabling proactive outreach that saved \$1.2M in ARR.
 - Conducted cadence calls with customers to gather feedback on product and support, translated insights into recommendations, and maintained customer journey documentation in Wrike.
- **BUILD (buildumass.com)** Amherst, MA
Co-President Feb. 2024 - May 2026
 - Led a 65+ member engineering organization delivering software solutions for non-profit clients including: MassPIRG, STEMpire, Human Service Forum, New England First Amendment Coalition, Amherst Ballet.
 - Scoped technical requirements and presented project milestones directly to non-profit clients across 8 production engagements, translating ambiguous stakeholder needs into engineering roadmaps.
 - Implemented Agile workflows, code reviews, and CI/CD pipelines that reduced release cycles from 5 to 2 weeks.

PROJECTS — GITHUB.COM/SHREYANSHMISRA

- **Kapok Disaster Response** — Flutter, Dart, Firebase, Mapbox API, Hive
 - Led a team to deliver an iOS/Android disaster relief coordination app handed off to the RN Response Network (National Nurses United) for deployment to 5k+ nurses during active disaster response operations.
 - Built a full offline-first architecture using Hive for local persistence and a queued sync layer, enabling full task coordination, team management, and Mapbox map caching in zero-connectivity field environments.
- **Clause (HackUMass Best AI Hack)** — Python, FastAPI, TypeScript, Snowflake, Gemini API
 - Developed an AI-powered contract analysis platform using semantic similarity search to detect illegal clauses in legal agreements, reducing review times from 2 hours to 5 minutes, deployed to 3 legal clinics for beta testing.
 - Engineered a RAG pipeline and Snowflake vector store for embedding-based semantic search, achieving 92% accuracy in violation detection across 500+ contracts.
- **Flavor Pairing Knowledge Graph** — Neo4j Aura, FastAPI, Render, Python, React, D3.js
 - Built a Neo4j knowledge graph linking 935 ingredients across 1,700+ flavor compounds (240K+ flavor pairings), using weighted Jaccard similarity to find unusual but chemically-justified ingredient combinations.
 - Designed an interactive D3.js graph visualization with ingredient comparisons, letting users explore the molecular chemistry behind why unusual pairings actually work.

SKILLS

- **Languages:** Python, SQL, TypeScript, JavaScript, Java, R, C/C++, Swift, Kotlin.
- **Frameworks & Tools:** Git, AWS (S3, Lambda, EC2), GCP, Docker, Terraform, Jenkins, Snowflake, PostgreSQL, Firebase, Pinecone, Neo4j, Kafka, Spark, Airflow, dbt, React, Next.js, GraphQL, Redis, Excel, Tableau, Power BI, Figma.
